## Fast Connect Stripping Tool

## **Function**

The **Fast Connect Stripping Tool** is used for PROFIBUS / Ethernet cable stripping. The line end is prepared in one go ready for connection according to the Fast Connect standard.

## Instructions of use

- Adjust the knives at the side of the stripping tool using a hexagon key.
- Place the PROFIBUS or Ethernet cable into the stripping tool. Note: Leave the stripped line a bit longer. If need be, it can cut off later.
- 3. Hold the line tight and rotate the stripping tool around the line. Depending on the line type and the adjustment of the knives 2 to 4 rotations are necessary.
  - Note: Make sure that the line ends to be stripped for assembly are not wrenched.
- 4. If properly used, the PROFIBUS or Ethernet cable is almost ready for connection so that only the data line needs to be stripped still.
  - Infinitely variable steel blades provide for accurate stripping. Stripping of the cable sheath, braided screen and filler in one go.
